Tabella di valutazione delle distanze con la bussola sessagesimale.

UTILIZZO: Puntare un oggetto lontano e registrarne l'angolo. Successivamente spostarsi di 10m perpendicolarmente alla direzione collimata. Ricollimare l'oggetto e registrare il secondo angolo.

Fare la differenza tra i due angoli.

Trovare nelle colonnine a sinistra l'angolo ottenuto; nella colonnina a destra corrispondente avrete la vostra distanza dall'oggetto,

es:

campanile a 217°N

mi sposto di 10m in direzione 127°N

perpendicolare alla direzione

collimata e registro il campanile, dalla nuova posizione a 202.5°N

angolo=217-202.5=14.5°

Verifico nella tabella che tra 14.4° e 14.6° il campanile si trova a 38metri circa da me.

Creato da Giovanni Santostefano

BUSSOLA MILLESIMALE

Tabella di valutazione delle distanze con la bussola millesimale.
UTILIZZO: Puntare un oggetto lontano e registrarne l'angolo. Successivamente spostarsi di 10m perpendicolarmente alla direzione collimata. Ricollimare l'oggetto e registrare il secondo angolo. Fare la differenza tra i due angoli. Trovare nelle colonnine a sinistra l'angolo ottenuto; nella colonnina a destra corrispondente avrete la vostra distanza dall'oggetto.

Spostandosi di 100m anziché 10m a pari lettura angolare le distanze vanno moltiplicate x10
